

CONTINUITY & RESILIENCE

1 Day Cyber Security Simulation Game

Workshop description:

This simulation workshop aims to showcase the participants on how to drive cyber security in an organisation and to make stakeholders understand the importance of security in their daily operations. This simulation is run in an extremely engaging manner where each participant plays a role. The theme is built around a large corporation who is trying to improve its business reputation to gain customer confidence. As a team you need to work together to fulfil the mission of the simulation and during this journey you shall be doing the following:

- *Develop Cyber Security Policy*
- *Security Governance*
- *Conduct Risk Assessment*
- *Access Control*
- *Handle Security Incidents*
- *Security Operations*

This simulation confronts you how working with unreliable information can dramatically harm your business

Cyber Security Simulation Outcome:

- **People:** Awareness & understanding of policy & procedures and the impact of not following; communication; feedback on confronting each other on behaviour; knowledge and skills to perform security related activities
- **Process:** Were the security policy, processes and procedures fit-for-use and fit-for-purpose; were the procedures being adhered to?
- **Product:** Were security events and incidents detected and recorded; were products used for detection, prevention and recovery?
- **Partner:** Were all partner and supplier capabilities in the end-to-end chain aligned?

Learning Objectives:

- Awareness and importance of Cyber Security and Cyber Resilience
- Better understanding of the threats, risks and weaknesses
- Gain practical insights and tips on how to initiate and implement effective Cyber Security and Cyber Resilience initiatives
- See, feel and experience the impact of 'attitude' and 'behavior' as critical success or fail factors in Cyber Security

Who should attend?

- Information Security: Managers, Practitioners, Auditors, Project Managers, Consultants, Trainers, Experts
- Professionals from other domains like: Business Continuity Management, Risk Management, Governance and Compliance, Information Technology
- Equally good for experts as well as the newcomers
